	<b>COLLEGE OF COMPUTING AND INFORMATION SCIENCES</b>		
	<b>Final Assessment of Lab Exam (Summer 2021 Semester)</b>		
<b>Class Id</b>	107242	<b>Course Title</b>	Operating System lab
<b>Program</b>	BSCS	<b>Campus / Shift</b>	Main/ Morning
<b>Date</b>	July 15, 2021	<b>Total Marks</b>	20
<b>Duration</b>	02.5 hours	<b>Faculty Name</b>	Kazim Ali
<b>Student Id</b>	11070	<b>Student Name</b>	Kamisha Salim
<b>Code</b>	A		

**Instructions:**

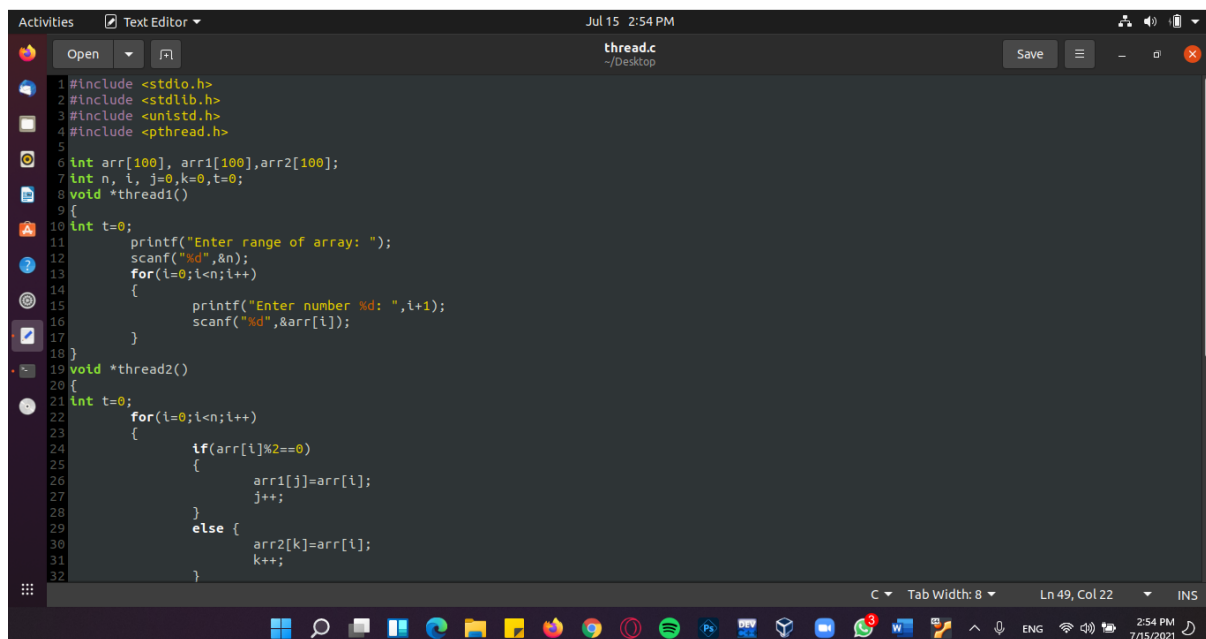

- Fill out your Student ID and Student Name in above header. □ Do not remove or change any part question paper. □ Write down your answers with title "Answer for Question# 00".
  - Handwritten text or image should be on A4 size page with clear visibility of contents.
  - In case of CHEATING, COPIED material or any unfair means would result in negative marking or ZERO.
  - Viva can be taken with prior notice, where deemed necessary.
  - **Caution:** Duration to perform Final Assessment is **02 hours only and 30 min** is given to cater all kinds of odds in submission of Answer-sheet. **Therefore, if you failed to upload answer sheet on LMS (in PDF format) within 2.5 hours' limit, you would be considered as ABSENT/FAILED.**
-

**Note: Question 1 to 3 is for those students who last number of student ID is odd number and Q4 to Q6 is for those students who have even number at last in Student ID**

## QUESTION – 4

Write a multithreaded program that outputs Odd and even. This Program should work as follows: The user will run the program and will enter a number on the command line. The program will then create a separate thread that outputs all the Odd or even the number entered by the user.

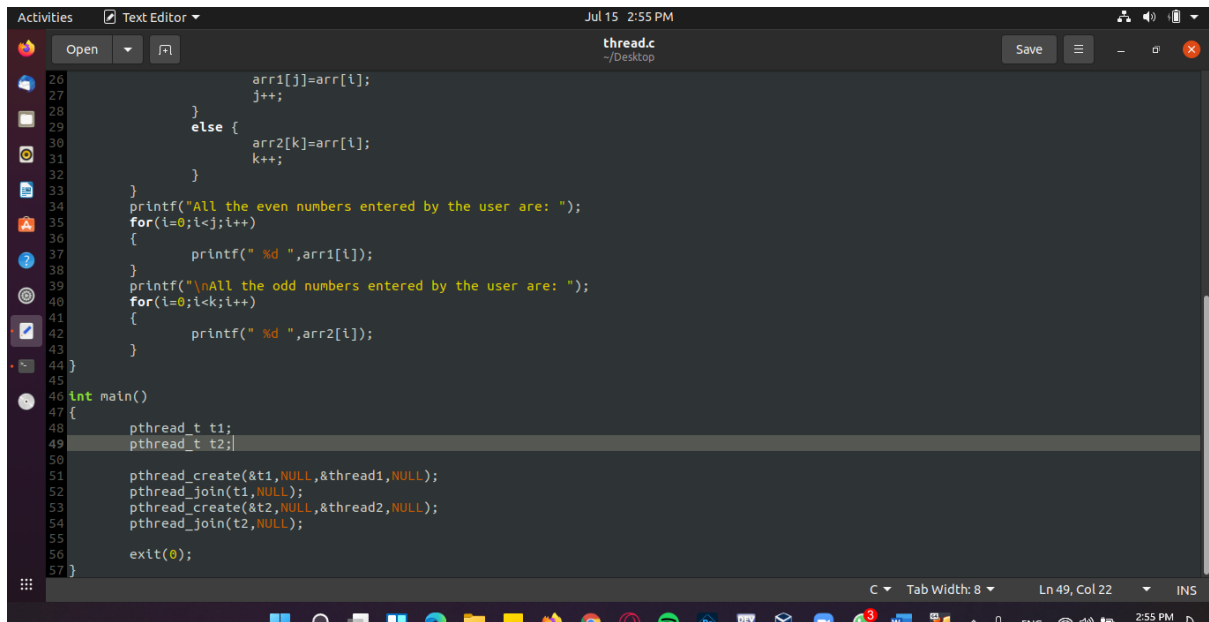

## CODE:

```
1#include <stdio.h>
2#include <stdlib.h>
3#include <unistd.h>
4#include <pthread.h>
5
6int arr[100], arr1[100], arr2[100];
7int n, i, j=0, k=0, t=0;
8void *thread1()
9{
10    int t=0;
11    printf("Enter range of array: ");
12    scanf("%d",&n);
13    for(i=0;i<n;i++)
14    {
15        printf("Enter number %d: ",i+1);
16        scanf("%d",&arr[i]);
17    }
18}
19void *thread2()
20{
21    int t=0;
22    for(i=0;i<n;i++)
23    {
24        if(arr[i]%2==0)
25        {
26            arr1[j]=arr[i];
27            j++;
28        }
29        else {
30            arr2[k]=arr[i];
31            k++;
32        }
```

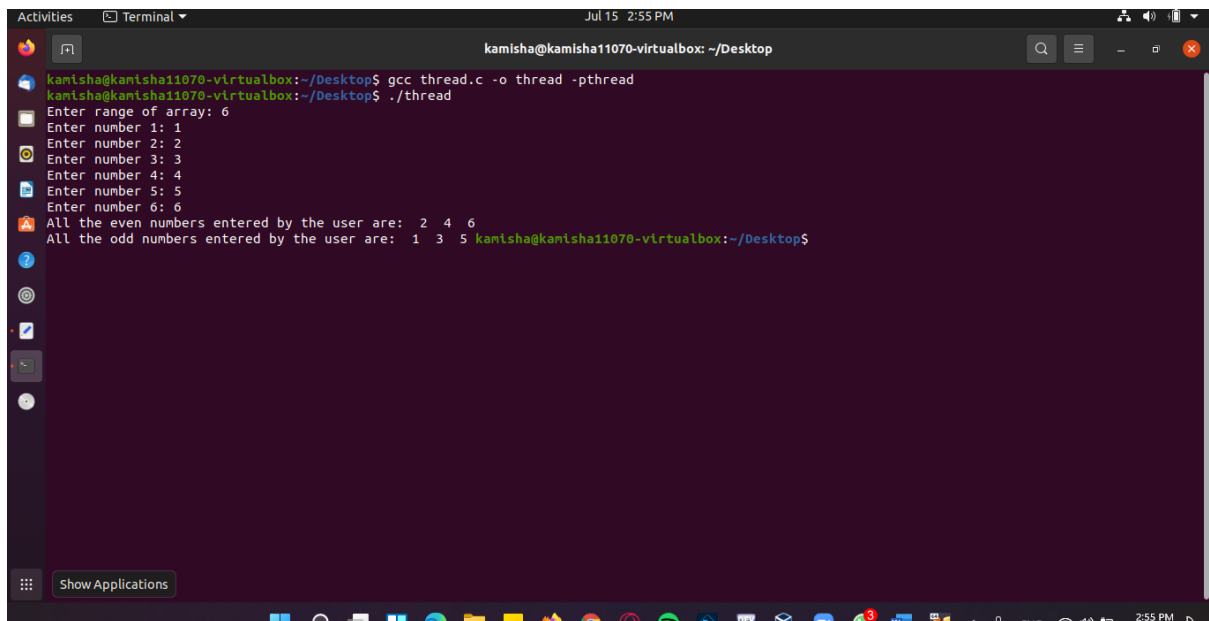

```
33    }
34    printf("All the even numbers entered by the user are: ");
35    for(i=0;i<j;i++)
36    {
37        printf(" %d ",arr1[i]);
38    }
39    printf("\nAll the odd numbers entered by the user are: ");
40    for(i=0;i<k;i++)
41    {
42        printf(" %d ",arr2[i]);
43    }
44}
45
46int main()
47{
48    pthread_t t1;
49    pthread_t t2;
50
51    pthread_create(&t1,NULL,&thread1,NULL);
```

```
26         arr1[j]=arr[i];
27         j++;
28     }
29     else {
30         arr2[k]=arr[i];
31         k++;
32     }
33 }
34 printf("All the even numbers entered by the user are: ");
35 for(i=0;i<j;i++)
36 {
37     printf(" %d ",arr1[i]);
38 }
39 printf("\nAll the odd numbers entered by the user are: ");
40 for(i=0;i<k;i++)
41 {
42     printf(" %d ",arr2[i]);
43 }
44 }
45
46 int main()
47 {
48     pthread_t t1;
49     pthread_t t2;
50
51     pthread_create(&t1,NULL,&thread1,NULL);
52     pthread_join(t1,NULL);
53     pthread_create(&t2,NULL,&thread2,NULL);
54     pthread_join(t2,NULL);
55
56     exit(0);
57 }
```

## OUTPUT:

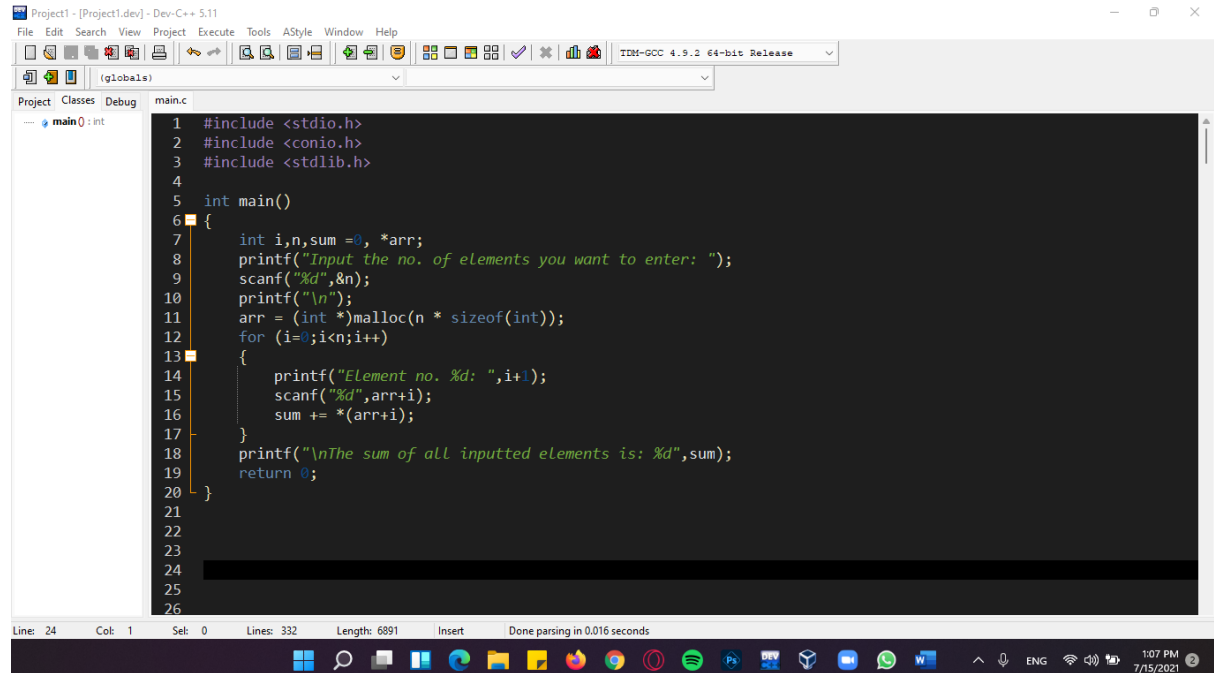

```
kamisha@kamisha11070-virtualbox: ~/Desktop
kamisha@kamisha11070-virtualbox:~/Desktop$ gcc thread.c -o thread -pthread
kamisha@kamisha11070-virtualbox:~/Desktop$ ./thread
Enter range of array: 6
Enter number 1: 1
Enter number 2: 2
Enter number 3: 3
Enter number 4: 4
Enter number 5: 5
Enter number 6: 6
All the even numbers entered by the user are:  2  4  6
All the odd numbers entered by the user are:  1  3  5 kamisha@kamisha11070-virtualbox:~/Desktop$
```

## QUESTION – 5

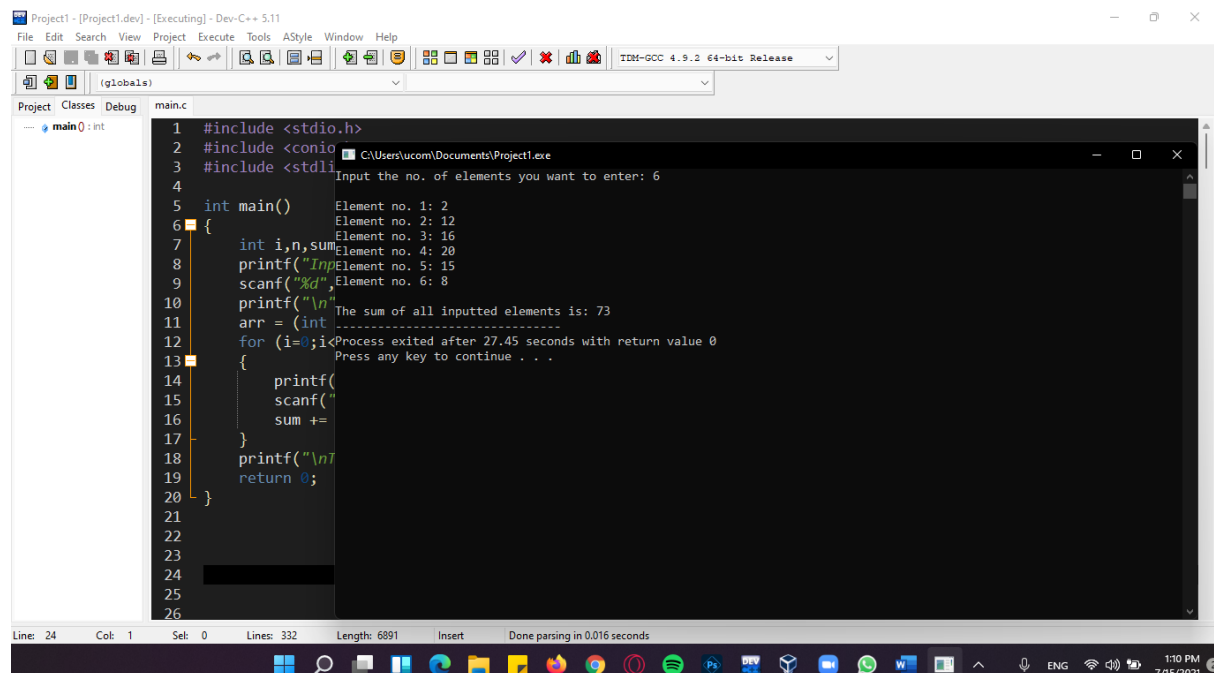

Find the sum of n numbers entered by user using dynamically allocated memory using C programming.

## CODE:

```
1 #include <stdio.h>
2 #include <conio.h>
3 #include <stdlib.h>
4
5 int main()
6 {
7     int i,n,sum =0, *arr;
8     printf("Input the no. of elements you want to enter: ");
9     scanf("%d",&n);
10    printf("\n");
11    arr = (int *)malloc(n * sizeof(int));
12    for (i=0;i<n;i++)
13    {
14        printf("Element no. %d: ",i+1);
15        scanf("%d",arr+i);
16        sum += *(arr+i);
17    }
18    printf("\nThe sum of all inputted elements is: %d",sum);
19    return 0;
20 }
```

## OUTPUT:

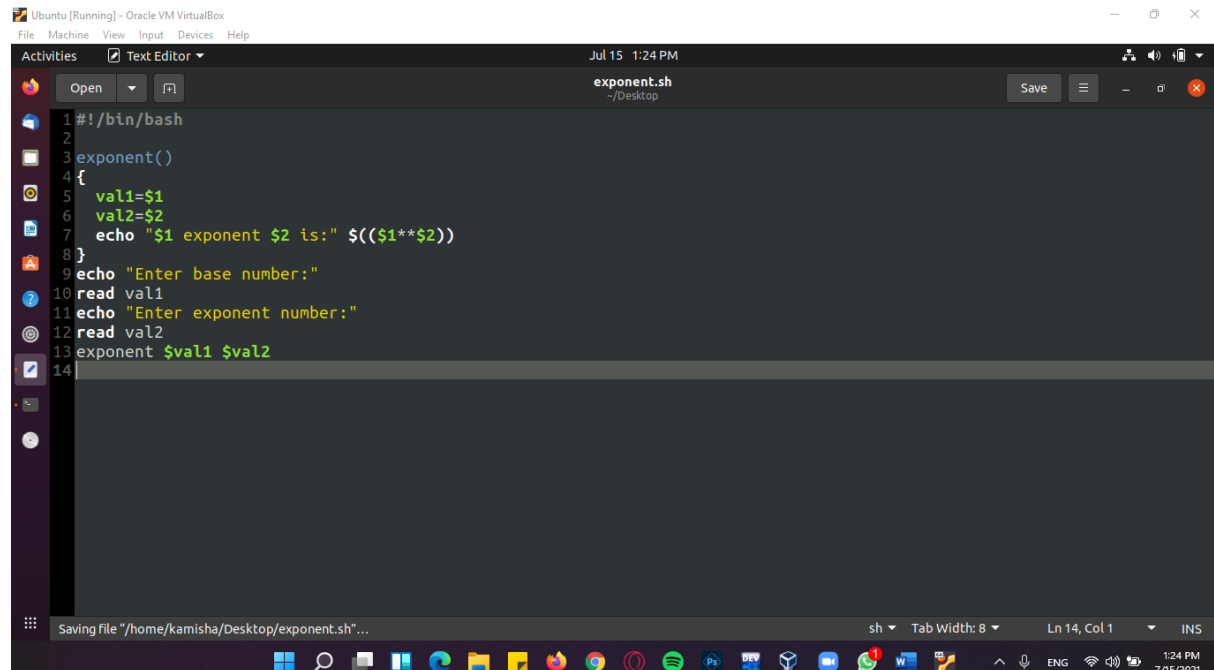

```
1 #include <stdio.h>
2 #include <conio.h>
3 #include <stdlib.h>
4
5 int main()
6 {
7     int i,n,sum
8     printf("Input the no. of elements you want to enter: 6
9     scanf("%d",&n);
10    printf("\n");
11    arr = (int *)malloc(n * sizeof(int));
12    for (i=0;i<n;i++)
13    {
14        printf("Element no. 1: 2
15        scanf("%d",arr+i);
16        sum += *(arr+i);
17    }
18    printf("\nThe sum of all inputted elements is: 73
19    return 0;
20 }
```

## QUESTION – 6

Create a function that takes a base number and an exponent number and returns the calculation.

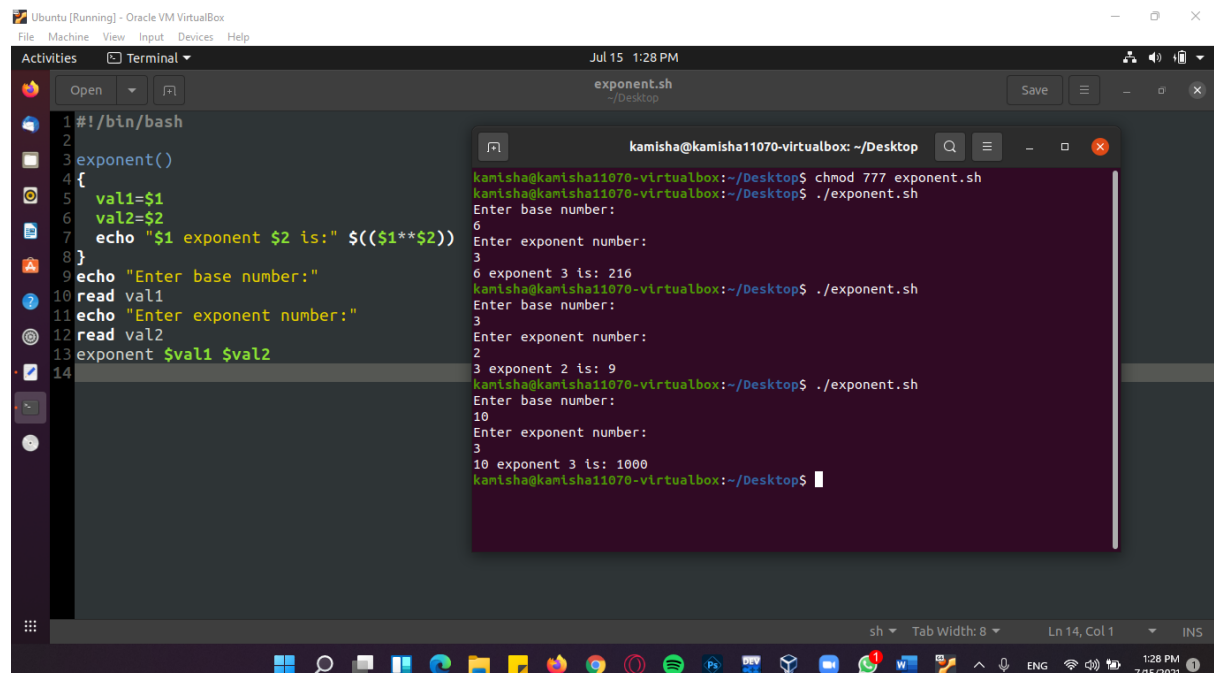

## CODE:

The screenshot shows a text editor window titled 'exponent.sh' with the following code:

```
1#!/bin/bash
2
3exponent()
4{
5    val1=$1
6    val2=$2
7    echo "$1 exponent $2 is:" $((val1**val2))
8}
9echo "Enter base number:"
10read val1
11echo "Enter exponent number:"
12read val2
13exponent $val1 $val2
14
```

## OUTPUT:

The screenshot shows a terminal window with the following output:

```
kamisha@kamisha11070-virtualbox: ~/Desktop
kamisha@kamisha11070-virtualbox:~/Desktop$ chmod 777 exponent.sh
kamisha@kamisha11070-virtualbox:~/Desktop$ ./exponent.sh
Enter base number:
6
Enter exponent number:
3
6 exponent 3 is: 216
kamisha@kamisha11070-virtualbox:~/Desktop$ ./exponent.sh
Enter base number:
3
Enter exponent number:
2
3 exponent 2 is: 9
kamisha@kamisha11070-virtualbox:~/Desktop$ ./exponent.sh
Enter base number:
10
Enter exponent number:
3
10 exponent 3 is: 1000
kamisha@kamisha11070-virtualbox:~/Desktop$
```
